

ANDRIES TSHILIDZI MOKONO

Graduate Software Engineer | Pretoria, Gauteng

andriescodes@gmail.co.za | +27 68 405 7493 | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Motivated Graduate Software Engineer with hands-on training from WeThinkCode_, one of South Africa's leading coding academies. Proficient in Python, Java, SQL, Shell scripting, and Git with experience building algorithmic solutions, command-line applications, and database-driven projects. A collaborative problem-solver who thrives in Agile team environments and is eager to contribute to innovative software teams across South Africa.

TECHNICAL SKILLS

Python | Java | SQL (SQLite, PostgreSQL) | Shell / Bash scripting
Git & GitLab/GitHub | Linux / Unix | Docker & Containerization | CI/CD Pipelines
Algorithms & Data Structures | Agile / Scrum | Unit Testing & Debugging | Supabase (BaaS)
Machine Learning / Prompt Engineering

WORK EXPERIENCE

Software Engineering Trainee — WeThinkCode_ | Johannesburg, Gauteng | Sept 2024 – Dec 2025

- Completed an intensive, project-based NQF Level 6 software engineering programme focused on practical industry readiness.
- Built command-line applications and algorithmic tools in Python and Java, applying OOP principles, design patterns, and clean-code standards.
- Developed and queried relational databases using SQL; wrote shell scripts to automate repetitive development tasks.
- Collaborated in peer-programming pairs and Agile sprints, managing code via Git/GitHub with branching strategies and pull request reviews.
- Completed projects in data structures and REST API integration, delivering working software to defined requirements.
- Participated in code reviews and retrospectives, consistently incorporating feedback to improve code quality and development practices.

NOTABLE PROJECTS

Robot Worlds — Multiplayer CLI Game (Java, SQL, Docker) | 2025

- Built a multi-client TCP server/client robot simulation game, handling concurrent connections and game-state management.
- Implemented a JSON-based communication protocol between server and clients across a shared virtual world grid.

Smart Health — AI Health Guidance Chatbot (Python, Flask, Gemini AI) | 2025

- Built a full-stack AI-powered health chatbot using Python Flask (backend) and Streamlit (frontend), integrated with Google Gemini 2.0 API to provide personalised dietary guidance based on medical conditions.
- Implemented a REST API with Flask-CORS supporting real-time AI responses, 12 condition-specific quick-tip presets, and a doctor-finder feature using Google Maps for location-aware specialist referrals.
- Secured the application by managing API keys via .env and .gitignore, preventing credential exposure on GitHub.

EDUCATION

Software Engineering — NQF Level 6 (Diploma) | WeThinkCode_, Johannesburg | Sept 2024 – Dec 2025

Competencies: Python, Java, SQL, Shell, Git, Data Structures, Agile

ADDITIONAL INFORMATION

Citizenship: South African Citizen – ID available on request

Equity: African Male

Languages: English (Fluent), Tshivenda (Native), Tswana/Zulu (Conversational)

Availability: Available immediately
